LAMTOR5-centered excitatory-neuron consensus network

U1 is upstream context; D1-D3 nodes lie downstream; arrows follow the Bayesian-network direction

HOW TO READ

Node size and x/12 show neighborhood recurrence across the 12 supporting runs

U1: upstream distance to LAMTOR5

Thick black border: mitochondrial query hit at >=3/12

NODE FILL · PHASE 8 DIRECT DEG

- Both AD-up and AD-down
- AD-down only
- AD-up only
- No stored direct DEG

PATHWAY OUTLINE

OXPHOS and complex I pass BH FDR < 0.05; cristae and mTORC1 are contextual

- ETC / oxidative phosphorylation
- Mitochondrial complex I biogenesis
- Cristae formation
- mTORC1-mediated signaling

RADIAL DISTANCE

U1: upstream context; D1-D3: minimum downstream steps

DISPLAY SCOPE

17 nodes / 16 edges

All LAMTOR5 edges: 1 incoming, 9 outgoing

D3 paths to all 8 observed query hits

All model edges among displayed nodes are retained

Display threshold >=3/12 is a coverage choice, not a significance cutoff
