

HOW TO READ

Node size and n/5 show neighborhood recurrence across the 5 supporting runs

U1/U2: upstream distance to LAMTOR5

Thick black border: mitochondrial query hit at ≥ 0.5

NODE FILL - PHASE & DIRECT DEG

- Both AD-up and AD-down
- AD-down only
- AD-up only
- No stored direct DEG

PATHWAY OUTLINE

OxPHOS, complex I, and protein degradation pass BH FDR < 0.05; translation and mTORC1 are contextual

- ETC / oxidative phosphorylation
- Mitochondrial complex I biogenesis
- Mitochondrial protein degradation
- Translation
- mTORC1-mediated signaling

RADIAL DISTANCE

U1-U2: upstream context; D1-D3: minimum downstream steps

DISPLAY SCOPE

28 nodes / 28 edges
All LAMTOR5 edges: 1 incoming, 8 outgoing
D3 paths to all 14 observed query hits
All model edges among displayed nodes are retained
Display threshold ≥ 0.5 is a coverage choice, not a significance cutoff
