

APOE-centered astrocyte consensus network

U1-U2 nodes are upstream context; D1-D2 nodes lie downstream; arrows follow the Bayesian-network direction

HOW TO READ

Node size and x/4 show neighborhood recurrence across the 4 supporting runs

U1/U2: upstream distance to APOE

Thick black border: mitochondrial query hit at >=1/4

NODE FILL · PHASE 8 DIRECT DEG

- Both AD-up and AD-down
- AD-down only
- AD-up only
- No stored direct DEG

PATHWAY OUTLINE

Contextual annotations; none has BH FDR < 0.05

- Amyloid fiber formation
- Cholesterol transport / efflux
- Cristae formation

DISPLAY SCOPE

19 nodes / 18 edges

All APOE edges: 2 incoming, 11 outgoing

D2 paths to all 7 observed query hits

Display threshold >=1/4 is a coverage choice, not a significance cutoff
