

APOE-dependent sex divergence in mitochondrial transcriptional responses in AD

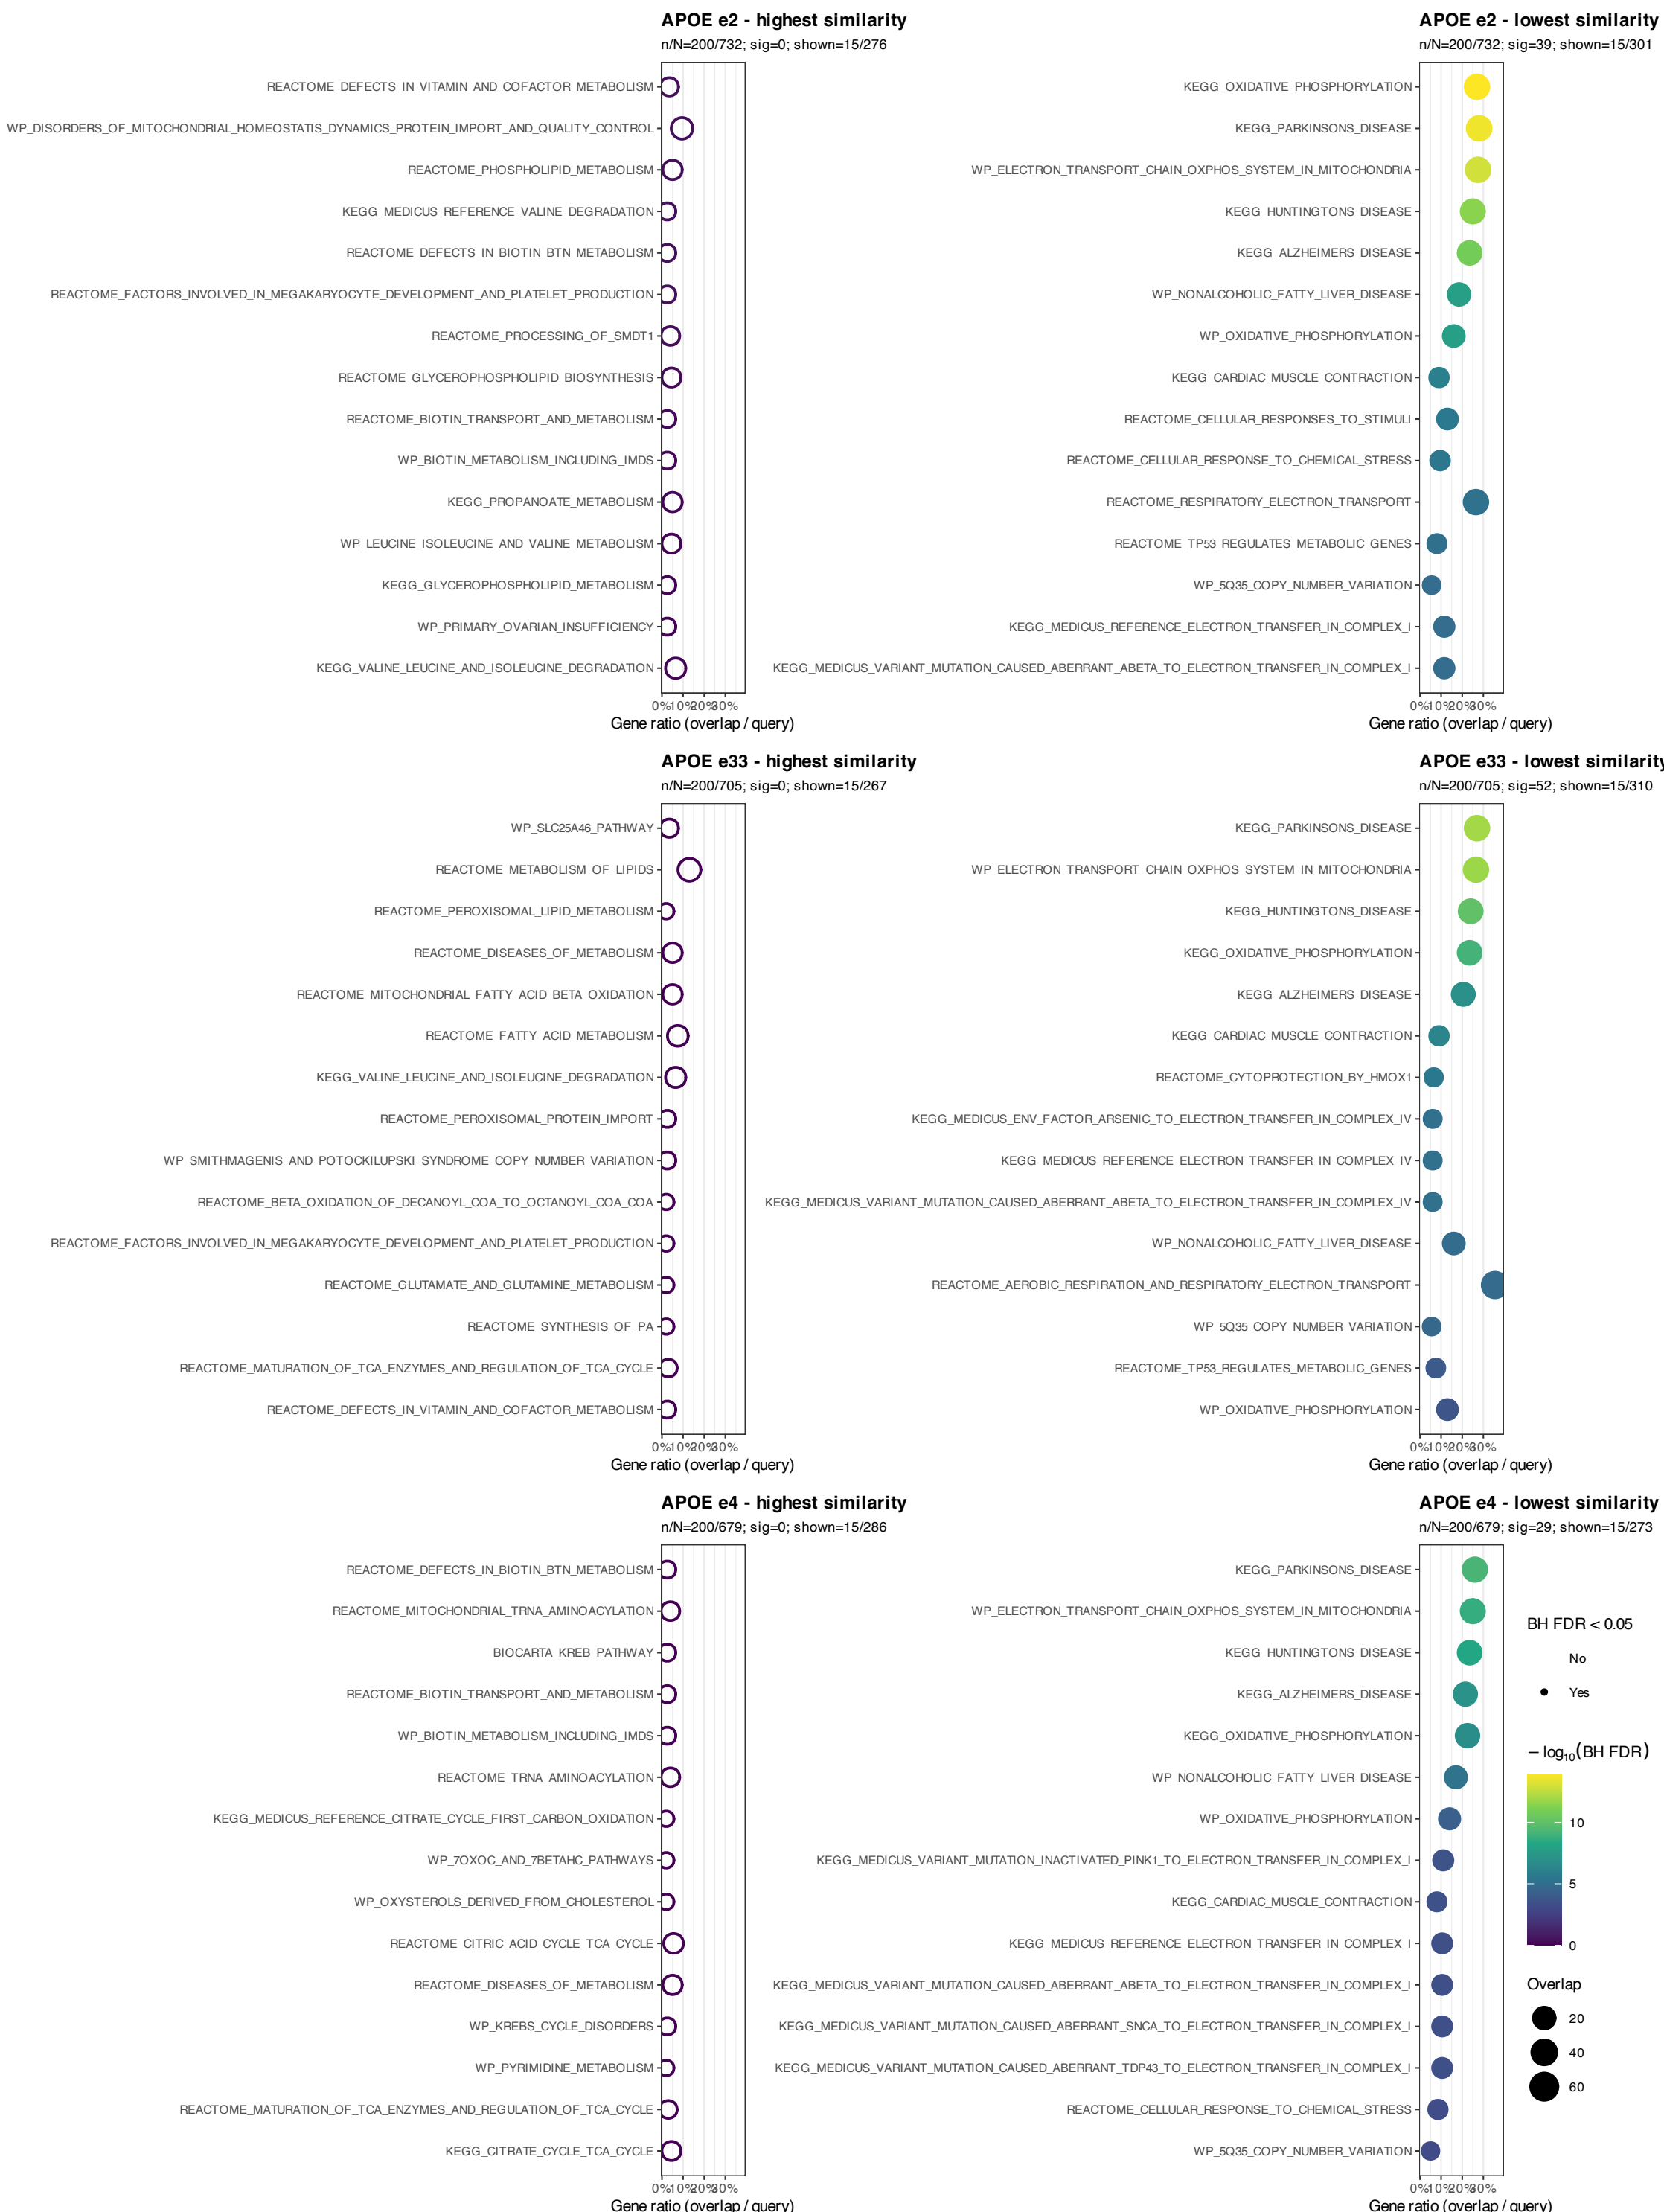

core_mito; mitochondrial-restricted Yu analogue; Human MSigDB C2:CP v2026.1.Hs

A. Highest- and lowest-similarity mitochondrial genes

Same (green), Different (orange), and Opposite (purple)

B. C2:CP pathway matches for 200-gene score tails

Panel A: green = Same, orange = Different, purple = Opposite; (0,0) remains in the score denominator but is not tiled. Missing states are excluded; * denotes directional BH FDR <= 0.05. Panel B shows the top stored pathway matches for both 200-gene tails regardless of FDR; x = gene ratio, size = overlap, color = FDR, filled = FDR < 0.05.
