

Evidence atlas for selected MT key drivers

Drivers inside the fixed 1,136-gene core MitoCarta inventory

10 selected genes • 26 circle-displayed contexts • 30 total passing contexts • 161 included KDA calls

A Network evidence matrix

B Run occurrence and evidence breadth

Run counts use all included KDA calls in which the gene was explicitly tested

Significant KDA: returned significant by call_key_drivers().
Conservative support: ≥ 2 other query genes, enrichment > 1 , and run $q \leq 0.05$.

C Network stability

Leave-one-fine-cell-type diagnostics
