

Evidence atlas for selected non-MT key drivers

Drivers outside the 1,136-gene core MitoCarta inventory

15 selected genes • 21 circle-displayed contexts • 22 total passing contexts • 161 included KDA calls

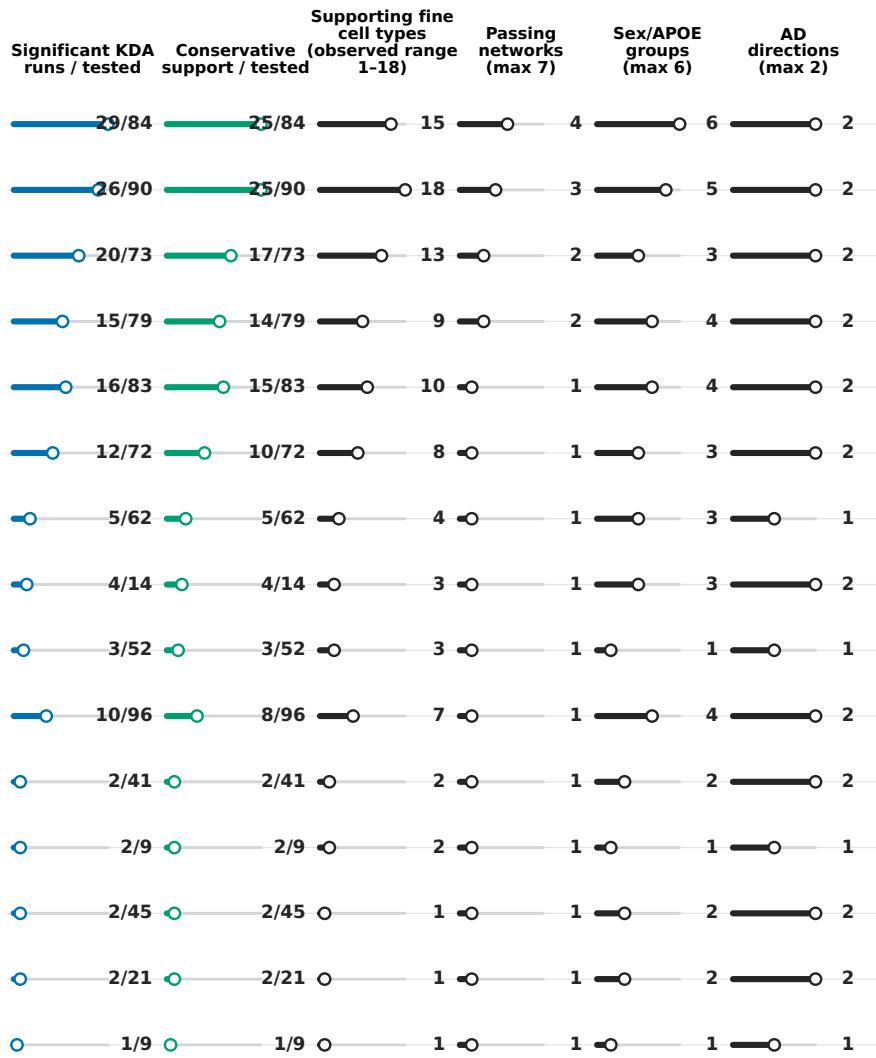

A Network evidence matrix

Tile number = within-network & non-MT driver rank

B Run occurrence and evidence breadth

Run counts use all included KDA calls in which the gene was explicitly tested

Significant KDA: returned significant by call `key_drivers()`.
Conservative support: ≥ 2 other query genes, enrichment > 1 , and run $q \leq 0.05$.

C Network stability

Leave-one-fine-cell-type diagnostics
