

Sex- and APOE-stratified support for non-MT key drivers

Primary AD-up and AD-down mitochondrial queries • descriptive strata, not interaction tests

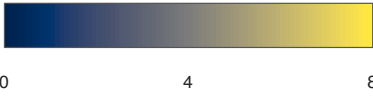

15 circle genes • 21 circle-displayed contexts • 22 total passing contexts • 264 cells

Net	Gene	Circle Extended	Broad network	AD-up mitochondrial query						AD-down mitochondrial query						Network aggregate q -log10(q), separate scale	Support / Coverage usable	Coverage usable / eligible	Tier	Rank
				Female			Male			Female			Male							
				APOE ε2	APOE ε3/ε3	APOE ε4	APOE ε2	APOE ε3/ε3	APOE ε4	APOE ε2	APOE ε3/ε3	APOE ε4	APOE ε2	APOE ε3/ε3	APOE ε4					
•	RPL11	Astrocytes														3/20		20/21		1
•	RPL11	Excitatory neurons														20/97		97/97		1

Figure keys

Stratum ACAT evidence

capped -log10(stratum ACAT P)

Supporting-dot area

fraction of usable queries supporting

Cell states

- supporting tested
- tested, zero support
- eligible, no usable test
- no eligible query

Row annotations

- circle-displayed
- passing below display cap
- broader mito reference
- Astrocytes
- Excitatory neurons
- Inhibitory neurons

Evidence tier

- Tier 1: recurrent/stable
- Tier 2: localized/unstable
- Tier not assessable
- Microglia
- OPCs
- Oligodendrocytes
- Vasculature

Neutral right-side points show network q, not stratum P.

Shapes and direct labels preserve meaning without color.

Each cell aggregates eligible fine-cell-type queries within one fixed broad Bayesian network.

Non-MT denotes genes outside core MitoCarta; network key-driver evidence prioritizes candidates but does not prove causality.
