

Phase 18 key-driver candidates across broad cell networks

Non-MT drivers

Up to five passing candidates per network, ranked by aggregate ACAT q

Legend

- Broad-network band
- Capped $-\log_{10}(\text{ACAT } q)$
- Same gene across networks
- Extended mitochondrial reference

Common evidence scale: 0–15

Gray slots: fewer than five passing genes

Center links mark repeated displayed genes across networks; they are not network edges
