

Phase 18 key-driver candidates across broad cell networks

Case 1 — core MitoCarta driver in the run query

Up to five passing candidates per network, ranked by aggregate ACAT q value
Self-overlap was removed before run-level evidence was combined

Legend

broad network

capped -log10(ACAT q)

same gene across networks

mtDNA-encoded candidate

Common scale 0–15

Outer cap: $q \leq 10^{-15}$
