

COX7C

WEAK / INCOMPLETE

WHAT THE DATA SHOW

One published bulk-brain summary record: AD + RNA splicing
Within 1 Mb (Bellenguez): smallest $P\ 8.579 \times 10^{-14}$
Lead variant rs62375397

WHAT THIS DOES NOT PROVE

One evidence record is repeated in two network settings.
The expression test did not pass.
The splicing shared-variant test was incomplete.

Initial: weak · 2 network settings Spinal-fluid: 0/3

RPS15

TOP FOLLOW-UP; INCOMPLETE

WHAT THE DATA SHOW

Within 1 Mb (Bellenguez): smallest $P\ 4.089 \times 10^{-30}$
Lead variant rs12151021
Walker neocortex expression: $P\ 2.120 \times 10^{-6}$
Corrected cutoff 3.759×10^{-6} : passed

WHAT THIS DOES NOT PROVE

Expression-prediction data and matching variant correlations were missing.
Three bulk-brain tracks had signals, but the gene and cell setting
and a shared variant remain untested.

Follow-up: 31/37 measured · 3 tracks Spinal-fluid: 0/3

SELENOW

WEAK GENE-LIST EVIDENCE

WHAT THE DATA SHOW

Published list based on predicted expression includes SELENOW
Bellenguez: smallest $P\ 6.410 \times 10^{-5}$
Significance cutoff 5×10^{-8} : not passed

WHAT THIS DOES NOT PROVE

No score, independent confirmation, or exact excitatory-neuron match.
Wightman variants were only nearby.
No expression or splicing follow-up started.

Initial: weak · 1 network setting Spinal-fluid: 0/3

ANKRD11

AD SIGNAL NEARBY ONLY

WHAT THE DATA SHOW

Within 1 Mb (Bellenguez): smallest $P\ 1.283 \times 10^{-11}$
Lead variant rs56407236
Walker brain expression: $P\ 1.819 \times 10^{-4}$
Corrected cutoff 4.522×10^{-6} : not passed

WHAT THIS DOES NOT PROVE

We could not confirm whether splicing data were available.
The shared-variant test could not be run.
A nearby AD signal does not prove ANKRD11 is the affected gene.

Initial: none found · 1 network setting Spinal-fluid: 0/3
