

A Why 54 planned gene tests stopped

27 gene-network pairs • 27 expression tests • 27 splicing tests

42

**No strong nearby
AD variant signal**

Nearby AD-signal
cutoff not passed

4

**No strong gene-
expression signal**

Expression-signal
cutoff not passed

2

**Required inputs
unavailable**

Prediction method or
variant correlations missing

6

Could not assess

Splicing-data status
unresolved

Each test appears in one category—not a sequence of losses.

A test stops at its first missing requirement.

B Same variant?

0

completed tests

Probability not calculated

No test had all
required inputs
