

COX7C-centered astrocyte consensus network

U1-U2 nodes are upstream context; D1-D2 nodes lie downstream; arrows follow the Bayesian-network direction

HOW TO READ

Node size and x/2 show neighborhood recurrence across the 2 supporting runs

U1/U2: upstream distance to COX7C

Thick black border: mitochondrial query hit at >=1/2

NODE FILL - PHASE 8 DIRECT DEG

- Both AD-up and AD-down
- AD-down only
- AD-up only
- No stored direct DEG

PATHWAY OUTLINE

Nonredundant representatives; all have BH FDR < 0.05

- ETC / oxidative phosphorylation
- Cristae formation
- Cytosolic ribosome

RADIAL DISTANCE

U1-U2: upstream context; D1-D2: minimum downstream steps

DISPLAY SCOPE

23 nodes / 23 edges

All COX7C edges: 1 incoming, 15 outgoing

D2 paths to all 10 observed self-excluded query hits

All model edges among displayed nodes are retained

Display threshold >=1/2 is a coverage choice, not a significance cutoff
