

LANE A · LOOK UP RESULTS IN PUBLIC DATA

All 47 gene-network pairs

Search public FunGen results

Likely AD variants · effects on gene activity or splicing
Pre-computed results from a fixed public data snapshot

Public-data matches highlighted three genes

APOE · COX7C · SELENOW
Four gene-network pairs · original source grades retained

LANE B · TEST WHETHER AD AND GENE ACTIVITY SHARE A DNA SIGNAL

27 gene-network pairs · 19 non-mitochondrial genes

1 AD-linked DNA region

Bellenguez AD · GCST90027158
Spinal-fluid biomarkers (CSF):
GCST90726396 · GCST90726397
GCST90726398
54 AD gene tests · 57 CSF screens

2 Variant affects the gene

DNA-to-gene link (QTL)
Activity (eQTL) · splicing (sQTL)
APOE protein (pQTL; NG00130.v2)
RPS15 check (NG00184.v1)
eQTL Catalogue r7

3 Prepare matching data

Matching variants + genome
Complete statistical model
Matched ancestry and
variant correlation (LD)
Every item is required

4 Shared DNA signal

Probability both match
(PP.H4)
After steps 1-3
With compatible inputs

Starting gene list
(chosen in advance)

47 gene-network pairs
25 unique genes

Top network genes retained
for genetic follow-up

List fixed in advance

mtDNA

Mitochondrial genes

20 pairs · 6 genes

Dedicated mitochondrial data
can add validation

Each completed step adds one layer of evidence.

Arrows show test order; remaining steps guide future validation.
