

COX7C

BULK-BRAIN SUMMARY RECORD

WHAT THE DATA SHOW

Published bulk-brain summary record: AD + RNA splicing

Bellenguez ± 1 Mb: P 8.579×10^{-14} ; lead rs62375397

Walker brain expression: P 2.583×10^{-3}

Comparison: P above pre-set screening reference 5.167×10^{-6}

WHAT TO VALIDATE NEXT

One source record contributes to two network settings.

Next: use complete splicing and AD variant files for a shared-variant comparison, then test cell-specific data.

Original first-screen source category: weak · 2 networks
Spinal-fluid screens below both pre-set references: 0/3

SELENOW

PREDICTED-EXPRESSION GENE LIST

WHAT THE DATA SHOW

Published list based on predicted expression includes SELENOW

Bellenguez: smallest P 6.410×10^{-5}

Comparison: P above pre-set AD screening reference 5×10^{-8}

WHAT TO VALIDATE NEXT

Next: recover the model score and precise cell-type annotation.

Add expression or splicing data for a direct variant-level comparison in a matching brain-cell setting.

Original first-screen source category: weak · 1 network
Spinal-fluid screens below both pre-set references: 0/3

RPS15

AD REGION + BRAIN EXPRESSION

WHAT THE DATA SHOW

Within 1 Mb (Bellenguez): smallest P 4.089×10^{-30}

Lead variant rs12151021

Walker neocortex expression: P 2.120×10^{-6}

Comparison: P below pre-set screening reference 3.759×10^{-6}

WHAT TO VALIDATE NEXT

Three bulk-brain tracks make RPS15 a focused follow-up.

Next: add the prediction model and matching variant reference to test whether both results trace to one DNA variant.

Follow-up measured: 31/37 routes · 3 source tracks
Spinal-fluid screens below both pre-set references: 0/3

ANKRD11

AD REGION + BRAIN EXPRESSION

WHAT THE DATA SHOW

Within 1 Mb (Bellenguez): smallest P 1.283×10^{-11}

Lead variant rs56407236

Walker brain expression: P 1.819×10^{-4}

Comparison: P above pre-set screening reference 4.522×10^{-6}

WHAT TO VALIDATE NEXT

The nearby AD result prioritizes this region for follow-up.

Next: confirm splicing coverage and use complete variant files for a shared-variant comparison that directly tests ANKRD11.

Original first-screen source category: none found · 1 network
Spinal-fluid screens below both pre-set references: 0/3

Use cutoff categories as one evidence layer; combine them with gene activity, shared-variant tests, and independent datasets for validation.
