

A Public-data search highlighted APOE, COX7C, and SELENOW

47 gene–network pairs • moderate source grade: 0

Direct match • source grade: strong • 1 Direct matches • source grade: weak • 3

Each unit is one gene in one network; a gene may appear in more than one network.

B Three genes with direct public-data matches

APOE Astrocytes FIRST-SCREEN GRADE: STRONG

rs429358 • top candidate AD variant (score 1.0) • AD $P \approx 1.88 \times 10^{-155}$

Brain-tissue support; cell-specific astrocyte validation is a future step

COX7C Astrocytes + inhibitory neurons FIRST-SCREEN GRADE: WEAK

rs2010322 • brain RNA-splicing link (source confidence level 5) • AD $P \approx 2.64 \times 10^{-6}$

One source result spans two networks; an independent dataset can validate it

SELENOW Excitatory neurons FIRST-SCREEN GRADE: WEAK

Listed in a study linking predicted gene activity to AD

Future data can add the test score and exact neuron type

C Next validation routes for other genes

16 NUCLEAR GENES FOR ADDITIONAL VALIDATION
23 gene–network pairs • no direct match in this registered search

ANKRD11	ATP6V1F	COX4I1	COX6B1
DYNLT1	FTL	LAMTOR5	LAPTM4A
NCOA1	RPL11	RPL15	RPL38
RPLP1	RPS13	RPS15	UQCR10

DEDICATED MITOCHONDRIAL-GENETICS ROUTE
6 mitochondrial-DNA genes • 20 gene–network pairs

MT-ATP6	MT-CO2	MT-CO3
MT-CYB	MT-ND4	MT-ND5

Future validation: mitochondrial-DNA measurements and special quality checks.

PUBLIC DATA HIGHLIGHTED APOE, COX7C, AND SELENOW

Source grades describe this search; additional nuclear and mitochondrial datasets can expand validation.
