

A Current evidence and next steps for 54 planned gene tests

27 gene-network pairs • 27 expression tests • 27 splicing tests

42

Nearby AD P at/above conservative cutoff

$P \geq 5 \times 10^{-8}$
(screening category)

4

Gene-activity P at/above preset cutoff

Source-specific P-value screening category

2

Both signals present; complete inputs next

Prediction model + variant correlations

6

Splicing-input status to clarify next

Current public-file status recorded

Every planned test has a clear current status and next step.

Cutoff categories keep P-value interpretation conservative.

B Shared-variant validation next

0

completed tests

Probability currently unavailable

Complete model + reference inputs would enable this calculation
