

SEA-AD • Non-MT drivers

Post-hoc exploratory • FDR-only DEG query • coverage $\geq 80\%$ • aggregate $q \leq 0.05$

Legend

- Broad-network band
- Capped $-\log_{10}(\text{ACAT } q)$
- Same gene across networks
- Extended mitochondrial reference

Empty-list states

- Testable; no passing candidate
- KDA list not testable
- Unused rank; no backfill

Common evidence scale: 0–15

Curves show recurrence, not network edges

Center links mark repeated selected genes across networks; they are not network edges
